KÄHRS UPOFLOOR

ESTRAD, ESTRAD PLANO, ESTRAD DB, PODIUM NATURALE

Date: 11-2014

Please use felt floor protectors on all furniture to prevent floors from being scratched and to keep them easy to care for.

INITIAL CLEANING

Remove any loose dirt with a mop or a vacuum cleaner. Wash carefully with a mild alkaline or alkaline detergent using a combination machine with red pads or a floor cleaning machine and a wet vacuum cleaner. Rinse carefully. Treat the cleaned floor with an SHS machine using dry puffing or with a maintenance care agent.

POLISHING

Polishing is not necessary as the flooring has been PUR (polyurethane) treated in the factory.

DAILY MAINTENANCE

Alternate dry/damp cleaning with wet cleaning methods. Regular treatment with a combination machine keeps the floor clean, and heavy basic cleaning can be avoided. Use a mild alkaline cleaning and maintenance care agent. You can also clean the floor with an SHS machine using a maintenance care agent. When necessary, cleaning with a stronger maintenance agent is recommended.

BASIC CLEANING

Clean the floor with an alkaline or mild alkaline detergent, depending on the type of soiling. Use a floor cleaning machine with red or blue pads. Rinse the floor carefully. Apply a maintenance care agent solution to the cleaned floor and treat the dry surface with an SHS machine. When necessary, localised polishing can be carried out on areas with most traffic.
